Attempt: 1 Total Mark: 10 Marks Obtained: 10

Section 1: Coding

### 1. Problem Statement

Ravi is building a basic hash table to manage student roll numbers for quick lookup. He decides to use Linear Probing to handle collisions.

Implement a hash table using linear probing where:

The hash function is: index = roll\_number % table\_sizeOn collision, check subsequent indexes (i+1, i+2, ...) until an empty slot is found.

### You need to:

Insert a list of n student roll numbers into the hash table. Print the final state of the hash table. If a slot is empty, print -1.

The first line of the input contains two integers n and table\_size, where n is the

number of roll numbers to be inserted, and table\_size is the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert into the hash table.

## **Output Format**

The output should print a single line with table\_size space-separated integers representing the final state of the hash table after all insertions.

If any slot remains unoccupied, it should be represented as -1.

Refer to the sample output for formatting specifications.

# Sample Test Case

```
Input: 47
 50 700 76 85
 Output: 700 50 85 -1 -1 -1 76
 Answer
 #include <stdio.h>
 #define MAX 100
 // Initializes the hash table to -1
void initializeTable(int table[], int size) {
   for (int i = 0; i < size; i++) {
     table[i] = -1:
 }
 // Inserts roll numbers into hash table using linear probing
 void insertIntoHashTable(int table[], int size, int arr[], int n) {
   for (int i = 0; i < n; i++) {
     int roll = arr[i];
      int index = roll % size:
     // Linear probing to resolve collisions
     while (table[index] != -1) {
```

```
index = (index + 1) % size;
      table[index] = roll;
     // Prints the hash table
     void printTable(int table[], int size) {
       for (int i = 0; i < size; i++) {
          printf("%d", table[i]);
          if (i != size - 1) {
            printf(" ");
                                                                                      24,180,108,1
printf("\n");
     int main() {
       int n, table_size;
       scanf("%d %d", &n, &table_size);
       int arr[MAX];
       int table[MAX];
       for (int i = 0; i < n; i++)
          scanf("%d", &arr[i]);
       initializeTable(table, table_size);
    insertIntoHashTable(table, table_size, arr, n);
       printTable(table, table_size);
       return 0;
     }
     Status: Correct
                                                                              Marks: 10/10
```
